SKILLS

CLOUD

AWS

Terraform

DigitalOcean

Cloudflare

CI/CD & DEPLOYMENT

Jenkins

Bitbucket Pipelines

GitHub Actions

Blue-green & rolling deploys

OBSERVABILITY

Prometheus & Grafana

ELK stack

Elasticsearch

CloudWatch

SUMMARY

DevOps and cloud engineer with 6+ years owning CI/CD, container platforms, and production infrastructure. AWS Certified Solutions Architect and HashiCorp Terraform Associate — builds IaC modules, multi-environment pipelines, and observable systems that survive traffic spikes. Known for Terraform-backed AWS infrastructure and CI/CD pipelines with unit, integration, and UI tests — enabling production deploys at any time.

EXPERIENCE

SENIOR DEVOPS ENGINEER / PLATFORM ENGINEER

ObjectFirst. Remote from Warsaw, Poland | Aug 2024 - Present

Project: B2B Marketing & Infrastructure Platform

Enterprise marketing platform on microservices and Docker — platform ownership spans CI/CD, cloud migration planning, edge automation, and production reliability for lead-gen and subscription workloads.

Responsibilities

- Separated web, scheduled, and background workloads into independently scaled Docker Swarm services — absorbed 3× traffic with zero downtime and no client-facing errors.
- Developed and maintained CI/CD pipelines with Jenkins and Bitbucket — introduced API integration tests in CI, cutting manual backend QA from ~3–4 h/day to near zero and enabling daily releases on critical domains.
- Built Terraform modules for AWS infrastructure with CI plan/apply gates — reproducible, reviewable changes across staging and production.
- Authored full DigitalOcean → AWS migration plan; prefer native AWS/Cloudflare capabilities over custom infrastructure where it saves cost and ops burden.
- Managed Docker-based microservice infrastructure; integrated Cloudflare automation for redirects, bot protection, header injection, and caching rules.
- Accelerated releases with centralized secrets management for environment variables across services and environments.

- Built scheduled health checks and morning alerts with dashboards and Grafana — issues surfaced next business day instead of 1–2 weeks via client reports.
- Designed Jenkins database backup pipelines with restore validation — MySQL dumps to S3 with automated integrity checks.

Tools & Technologies: Docker Swarm, Jenkins, Bitbucket Pipelines, AWS (ECS, S3, RDS, CloudWatch, IAM), Terraform, Cloudflare, Grafana, Sentry, Shell, Python, MySQL, PostgreSQL, Redis.

| FULL STACK DEVELOPER

Hidden Hint. Poland, Warsaw | Jan 2024 - Aug 2024

Project: E-commerce Platforms for Digital Products

Concurrent Magento/Laravel marketplaces — backend-focused full stack delivery across four client platforms, with early Docker adoption while transitioning toward platform and DevOps work.

Responsibilities

- Delivered backend APIs and full stack features across concurrent Magento and Laravel projects.
- Introduced Docker for local and staging environments.
- Established integration test coverage for critical checkout flows — long-term stability across parallel production codebases.

Tools & Technologies: Docker, Magento 2, Laravel, PHP, OpenSearch, PHPUnit.

| TEAM LEAD

Puravita - Online Pharmacy (Switzerland). Switzerland, st. Gallen | Apr 2022 - Dec 2023

Project: National Online Pharmacy (Switzerland)

National pharmacy e-commerce on Magento 2 with microservices, partner integrations, and AWS-backed fulfillment — led delivery process and platform structure improvements.

Responsibilities

- Migrated 15 custom modules from multi-repo to monorepo — weekly release preparation cut from ~4 hours to ~20 minutes.
- Built fault-tolerant microservice for automated order fulfillment integrated with robotic warehouse partner systems.
- Operated Docker-based development and deployment workflows across Magento core and standalone services.
- Defined GitFlow strategy, QA gates, and review standards — reduced release complexity for a multi-team pharmacy network.
- Integrated Elasticsearch in a modular service layout balancing Magento with standalone workers.

Tools & Technologies: Docker, AWS, Elasticsearch, Magento 2, Laravel, PHP, MySQL.

TECHNICAL LEAD

Lindenvalley (E-commerce websites). Belarus, Minsk | Feb 2021 - Apr 2022

Project: E-commerce Solutions (Outsourcing)

Outsourced Magento programs for international retail clients — Technical Lead owning delivery standards, team process, and hands-on module development.

Responsibilities

- Introduced GitFlow, Jira workflows, and formal code review practices across concurrent client projects.
- Standardized Docker-based local and staging environments to improve consistency across the delivery team.
- Hosted internal sessions on clean architecture, SOLID, and maintainable module structure.

Tools & Technologies: Docker, Magento 2, PHP, Elasticsearch, MySQL.

EDUCATION

PROGRAMMER

College of Business and Law. Belarus, Minsk | Sep 2016 - Jul 2019

Diploma in Programming

LANGUAGES

Russian – Native · English – Upper Intermediate · Polish – Intermediate · German – Intermediate

CERTIFICATES

- AWS Certified Solutions Architect - Associate
- HashiCorp Terraform Associate
- QA Automation Diploma
- Enterprise Patterns
- GOF And Grasp Design Patterns
