SKILLS

Architecture & Cloud · AWS (ECS, S3, RDS, CloudWatch, IAM) ·
Microservices & API design · DigitalOcean → AWS migration
planning · Docker / Docker Swarm · Terraform · Cloudflare (edge,
caching, bot protection)

Integration & Data · CRM & commerce system integration ·
Warehouse sync & failover patterns · PostgreSQL / MongoDB /
MySQL · Elasticsearch / OpenSearch · RabbitMQ / Redis · BigQuery /
Airbyte data pipelines

Delivery & Leadership · CI/CD architecture (Jenkins, Bitbucket) ·
Zero-downtime migrations · Monorepo & modular platform design
· Feature toggles / trunk-based delivery · Enterprise & GoF design
patterns · Technical leadership & cross-team alignment

LANGUAGES

Russian – Native

English – Upper Intermediate (B2)

Polish – Intermediate (B1)

German – Intermediate (B1)

SUMMARY

Solution Architect with 6+ years designing scalable platforms across e-commerce, SaaS, and B2B marketing infrastructure. AWS Certified Solutions Architect who bridges business goals and technical delivery — microservices decomposition, cloud migration, integration architecture, and cost-aware system design. Known for zero-downtime migrations, fault-tolerant integration patterns, and turning complex multi-system landscapes into maintainable, observable platforms.

EXPERIENCE

SOLUTION ARCHITECT / TECHNICAL LEAD

ObjectFirst. Remote from Warsaw, Poland | Aug 2024 - Present

Project: B2B Marketing & Infrastructure Platform

Enterprise marketing platform for physical backup appliances — lead generation, product documentation, subscription commerce, and multi-language content. Evolved from senior backend ownership to company-wide architecture and technical leadership.

Responsibilities

- Architected subscription & billing integration across CRM, web storefront, and partner commerce systems — fault-tolerant services with horizontal scaling under 3× traffic growth.

- Designed analytics data pipeline: moved heavy CRM reads off live API limits onto warehouse sync with failover-friendly jobs — daily senior firefighting dropped from ~3 hours to ~20 minutes.
- Led phased MongoDB/MySQL → PostgreSQL consolidation — one database instead of three (~3× lower cost), zero downtime on business-critical leads and form data.
- Planned and executed zero-downtime domain migration from legacy Server-type to Inventory-type subscription records — no production bugs.
- Authored full DigitalOcean → AWS migration plan; applied architectural principles to eliminate redundant microservice logic and prefer native cloud/edge features over custom builds.
- Designed lead capture, conversion API, and anti-spam architecture for the marketing platform — edge protection, rate limits, and AI-assisted lead quality filtering.
- Separated web, scheduled, and background workloads into independently scaled services — sustained load with no client-facing errors.
- Drove end-to-end observability patterns, CI/CD test architecture, and secure secrets management — accelerated release cadence from weekly to daily on critical domains.
- Promoted to Technical Lead (Apr 2026); mentor backend team on architecture standards, code review quality, and AI-assisted delivery practices.

Tools & Technologies: Laravel, PHP, PostgreSQL, MongoDB, MySQL, BigQuery, Airbyte, Elasticsearch, Docker Swarm, Jenkins, Bitbucket, AWS, Cloudflare, RabbitMQ, Redis, Python, Terraform, Sentry, Grafana.

| SOLUTION ARCHITECT / TEAM LEAD

Puravita - Online Pharmacy (Switzerland). Switzerland, st. Gallen | Apr 2022 - Dec 2023

Project: Puravita Online Pharmacy (Switzerland)

National pharmacy e-commerce with Magento 2 core, partner pharmacy network, robotic warehouse fulfillment, and recommendation-driven search — daily operations in German and English.

Responsibilities

- Defined fault-tolerant microservice boundaries around checkout, fulfillment, and partner integrations — balancing Magento modularity with standalone services.
- Architected Click & Collect: Google Maps UX, partner API availability/pricing comparison, and checkout flows spanning multiple pharmacy backends.
- Designed automated order-fulfillment microservice integrated with robotic warehouse partner systems.
- Migrated 15 custom modules from multi-repo to monorepo — weekly release preparation cut from ~4 hours to ~20 minutes.
- Introduced feature toggles and trunk-based development to de-risk frequent pharmacy-network changes.
- Aligned architecture with warehouse, call center, and back-office teams; translated operational constraints into modular Magento extensions.

Tools & Technologies: Magento 2, Laravel, PHP, AWS, RabbitMQ, Elasticsearch, Google Maps API, Boxalino, Docker.

TECHNICAL LEAD

Lindenvalley (E-commerce websites). Belarus, Minsk | Feb 2021 - Apr 2022

Project: Lindenvalley E-commerce Solutions (Outsourcing)

Outsourced Magento programs for international retail clients — raised architecture consistency and delivery standards across concurrent projects.

Responsibilities

- Designed Elasticsearch-backed product search and indexing architecture for personalized storefront experiences.
- Standardized Magento module architecture, GitFlow, and code review practices across the delivery team.
- Hosted internal architecture sessions on SOLID, enterprise patterns, and checkout extensibility for client-specific flows.

Tools & Technologies: Magento 2, PHP, Elasticsearch, MySQL, Docker.

FULL STACK DEVELOPER

Hidden Hint. Poland, Warsaw | Jan 2024 - Aug 2024

Project: Hidden Hint E-commerce Platforms for Digital Products

Concurrent digital-product marketplaces — custom product-type modeling and pricing engines with strong test coverage.

Responsibilities

- Designed extensible virtual product-type module with dynamic pricing rules shared across frontend and backend.
- Established integration test strategy for pricing and checkout — long-term stability across four parallel platforms.
- Proposed lightweight Scrum cadence to improve cross-project delivery in a remote freelance environment.

Tools & Technologies: Magento 2, Laravel, PHP, OpenSearch, Docker, PHPUnit.

BACKEND DEVELOPER

iTechArt Group. Belarus, Minsk | Mar 2019 - Mar 2020

Project: iTechArt SaaS Platforms and Startups

Early-stage SaaS and e-commerce startups — REST APIs, performance tuning, and integration testing foundations.

- Built REST APIs and integration/unit test suites for SaaS backends.
- Implemented performance optimizations and React/Redux frontends on client projects.

Tools & Technologies: Laravel, PHP, React, MongoDB, PostgreSQL, MySQL, PHPUnit.

EDUCATION

PROGRAMMER

College of Business and Law. Belarus, Minsk | Sep
2016 - Jul 2019
Diploma in Programming

CERTIFICATES

- AWS Certified Solutions Architect - Associate
- Terraform Associate
- Enterprise Patterns
- GOF And Grasp Design Patterns
- Adobe Certified Professional Adobe Commerce Developer
- QA Automation Diploma
